                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAB34100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
 New isolated nucleic acid molecules encoding 49 human secreted proteins used for preventing, treating or ameliorating medical conditions, for diagnosing pathological conditions or as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a ligand of less than 6 kD that binds to a polypeptide containing the sequence GlyTyrGlyGlyProHisGlyGly (A) or an analogue that is the retro-inverso isomer of (A). The sequence A is an octapeptide motif from the prion protein (PrP). The ligands are identified by binding assays with the peptide (A) or peptides containing (A). The ligands are used for detecting prion proteins (or prions) in biological or environmental samples, e.g. for diagnosis, also for removing them from samples, for treating or retarding development of prion-associated diseases, sepecially Creutzfeldt-Jakob diseases (in latrogenic, new variant, familial or sporadic forms), but also Gerstmann-Straussler-Scheinker disease, familial insomnia,
                                                                                                                                                                                                               19-MAR-1999;
10-DEC-1999;
                                                                                                                                                                                                                                                                                                                                                                                                           antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; vulnerary; gene therapy; autoimmune disease; hyperproliferative disorder; neoplasm; cancer; cardiovascular disorder; cerebrovascular disorder; angiogenesis; nervous system disorder; infection; ocular disorder; wound healing; skin aging; food additive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              scrapie, bovine or feline spongiform encephalopathy, transmissible or exotic ungulate encephalopathy, or chronic wasting disease. The present sequence is a ligand of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and vulnerary. The polynucleotides and polypeptides can be used to rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a nutoimmune diseases, hyperproliferative disorders e.g. neoplasms or cancer of the breast or liver, cardiovascular disorders, infections caused by bacteria, viruses and fungi and ocular disorders. The polypeptides can consistent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can as a food additive or preservative to increase or decrease storage capabilities. AAC59440 to AAC59448 and AAB34091 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table in the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating syndrome associated with ORFX-associated disorder. ORFX polynucleotide
                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ
                                                                                                                                                                                                                                                        systemic cytokine damage.
                                                                                                                                                                                                                                                                                                                                            useful for treating burns, incisions,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast; gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                        muscular disorder; reproductive disorder; gastrointestinal disorder; pulmonary disorder; cardiovascular disorder; renal disorder; proliferative disorder; inflammation.

These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequences are supported to the present sequences and proliferative disorders.
                                                                                                                                                                                                                                                                                                               Isolated nucleic acid \mathfrak n polypeptide is used in condition -

The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU18094-AAU18152 represent novel human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                did not form part of the printed specification, but was obtained electronic format directly from WIPO at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel nucleic acids and polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polypucleotides are especially useful in the diagnosis, prognosis, prevention and/or treatment of diseases which include kidney disorders (e.g. renal failure or nephritis), cardiovascular disorders (e.g. hypertension or myocardial infarction), blood disorders (e.g. anaemia or blood coagulation disorders).
                                                                                                                                                                                                                                                                                                                                                   cerebrovascular disorder; cerebral ischaemia; angiogenesis; nervous system disorder; Alzheimer's disease; infection; ocular corneal infection; wound healing; epithelial cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-NOV-2001

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked
                                                                                                                                                                                                   Novel polypeptides and polynucleotides useful as diagnostic reagents diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, for treating blood clotting disorder, haemophilia
                                                                                                                                                                                                                                                                                                WPI; 2001-476222/51.

                                                                                                                                                                                nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length: 0 seq length: 2000000000

Biottin--protein ligase (EC 6.3 4.-) (Biotin apo-protein ligase)
[Includes: Biotin--[methylmalonyl-CoA-carboxyltransferase] ligase
(EC 6.3 4.9); Biotin--[propionyl-CoA-carboxylase (ATP-hydrolyzing]]
ligase (EC 6.3 4.10) (Holocarboxylase synthetase) (HCS);
Biotin--[methylcrotonoyl-CoA-carboxylase] ligase (EC 6.3.4.11);
Biotin--[acetyl-CoA-carboxylase] ligase (EC 6.3.4.11);

SUBCELLULAR LOCATION: Cytoplasmic and mitochondrial.

TISSUE SPECIFICITY: MOSTLY EXPRESSED IN MUSCLE, PLACENTA, IN LESSER EXTENT IN THE BRAIN, KIDNEY, PARCREAS, LIVER AND LUNG.

DISEASE: DEFECTS IN HLCS ARE THE CAUSE OF HOLOCARBOXYLASE SYNTHETASE DEFICIENCY (HCS) (OR BIOTIN-RESPONSIVE MULTIPLE CARBOXYLASE DEFICIENCY), AN AUTOSOMAL RECESSIVE DISORDER CHARACTERIZED BY METABOLIC KETOACIDOSIS, HYPERAMMONEMIA, EXCRETION OF ABNORMAL ORGANIC ACID METABOLITES, AND DERMATITIS. CLINICAL AND OF ABNORMAL ORGANIC ACID METABOLITES, AND DERMATITIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COA:carbon-dioxide ligase (ADP-forming)].

CATALYTIC ACTIVITY: ATP + blotin + apo-[3-methylcrotonoyl-COA:carbon-dioxide ligase (ADP-forming)] = AMP + diphosphate + [3-methylcrotonoyl-COA:carbon-dioxide ligase (ADP-forming)].

CATALYTIC ACTIVITY: ATP + blotin + apo-[acetyl-COA:carbon-dioxide ligase (ADP forming)] = AMP + diphosphate + [acetyl-COA:carbon-dioxide ligase (ADP forming)].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BIOTIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
